

ROOF PITCH CHART

DIRECTIONS

To determine if your roof pitch is within the range required for your desired project, please do the following:

1. Print this gauge on transparency film for best results
2. Locate your desired product and pitch range to the right.
3. Hold up this card at arms length while standing in line with your roof peak and align the slope calculator corners with the corners of your roof.
4. You know your roof is within the required range when your roof pitch falls between the lines corresponding to your product's range.

PITCH RANGES FOR VELUX® PRODUCTS

Product Model	Pitch Range
VSE, VS, FSF, FS	0° to 85° * <i>* Pitches from 0° to 15° require a roof curb to make the skylight pitch greater than 15°.</i>
QVE, QVM, QFS, TSF, TTF, TSR, TTR	15° to 60°
GDL	35° to 53°
GPL	20° to 55°
